

LAKSHAN KUMAR J

Senior Full Stack Engineer — Node.js / TypeScript, React, Backend & Distributed Systems, AI/LLM

+91 86107 26520 | kumarlakshan1032@gmail.com | linkedin.com/in/lakshan-kumar-j | github.com/lakshan-jk | Bengaluru, India

PROFESSIONAL SUMMARY

Full-stack engineer and technical lead with 5.5 years across FinTech, EdTech, and streaming. Deep on the Node.js/TypeScript backend (Fastify/Express, REST APIs, microservices, event-driven systems), with a track record of reliability and performance at scale (sub-200ms p95, 99.9% uptime). Built a no-code platform for third-party service providers, integrated payments and third-party services, and led a 9-engineer team. Strong in React/Next.js and hands-on with AI/LLM (RAG, agentic workflows). Owns features end-to-end — from architecture through production.

TECHNICAL SKILLS

- Languages:** TypeScript, JavaScript, Python, SQL
- Backend:** Node.js, Fastify, Express.js, REST APIs, GraphQL, microservices, WebSockets, event-driven (Kafka, BullMQ)
- Frontend:** React.js, Next.js, React Native, Redux
- Databases:** PostgreSQL, MySQL, MongoDB, Redis
- Cloud & DevOps:** AWS (EC2, S3, Lambda, CloudFront), Docker, Kubernetes, CI/CD (GitHub Actions, Jenkins)
- Architecture & Reliability:** System design, distributed systems, caching, idempotency, observability, SLIs/SLOs, safe migrations, high-availability
- Payments & FinTech:** Payment-gateway integration (Razorpay, PayU), webhooks, reconciliation, idempotency
- AI / LLM:** OpenAI, Claude, Ollama, RAG, vector search, agentic workflows (LangGraph / LangChain-style)
- Leadership:** Led 9 engineers, code review, mentoring, sprint ownership, Agile/Scrum

PROFESSIONAL EXPERIENCE

Neokred Technologies Dec 2022 – Apr 2026

SDE-3 & Team Lead — Bengaluru — FinTech (SaaS & API Platform)

- Architected Node.js/TypeScript microservices (Fastify) and REST APIs with layered Redis caching and event-driven flows (Kafka/BullMQ), sustaining thousands of concurrent users at sub-200ms p95 and 99.9% uptime.
- Built a no-code / low-code platform that let third-party API service providers configure and launch their own workflows and services without writing code — self-service customization behind a shared framework.
- Integrated payment gateways and webhooks with idempotent flows and transaction reconciliation and refunds — so retries never double-charge and ledgers stay consistent.
- Led a v1-to-v2 migration for reliability at scale: indexing, idempotent queue-backed workers, and autoscaling — eliminating timeouts and duplicate processing under load.
- Ran CI/CD, Docker and Kubernetes on AWS; led and mentored a 9-engineer team with code review and sprint ownership while staying hands-on.

Gravitorix — YourBackers (Freelance) Apr 2026 – Aug 2026

Sole Engineer — full-stack product, AWS architecture, and delivery

- Shipped a multi-service product end-to-end — Node.js backend on AWS (Lambda, S3, CloudFront) with React / React Native clients over a unified REST API — integrating payment gateways (Razorpay, PayU) and real-time features.
- Owned reliability, deployment, and production support end-to-end as the sole engineer; built an admin dashboard and analytics tooling.

BYJU'S Oct 2020 – Nov 2022

Software Engineer → Associate Software Engineer — Bengaluru

- Built backend features and REST APIs on a platform serving 50M+ accounts; delivered React/Redux interfaces for internal tooling.
- Implemented secure authentication (JWT, OAuth 2.0, RBAC) and optimized data retrieval with indexing, reducing response times at scale.

OPEN-SOURCE PROJECTS

context-engine · localrag github.com/lakshan-jk

TypeScript, Fastify, Python, OpenAI / Claude / Ollama

- A personalization context engine with a pure, side-effect-free core (exhaustively unit-tested) — intent routing, grounded responses, confidence and memory layers; plus a RAG pipeline with vector search and agentic tool-calling.

backend-mastery github.com/lakshan-jk

Node.js, Redis, AWS, GitHub Actions CI

- Open-source, runnable reference implementations of production backend patterns — caching, idempotency, rate limiting, RBAC, zero-downtime deployment — each with automated tests and CI.

EDUCATION

B.Tech, Computer Science Engineering — Kalasalingam University 2016 – 2020
